

Product Environmental Report

iPad Pro (12.9-inch)

October 30, 2018

Tackling climate change

73%

fewer emissions associated with making the cover glass, due to clean energy use

100%

renewable energy powering services like FaceTime, iMessage, Siri, and Apple Music

Energy efficient

68%

less energy consumed than the ENERGY STAR® energy efficiency limit

Responsible packaging

100%

of the wood fiber comes from recycled and responsible sources

<5%

plastic in retail box

Made with recycled plastic

35%

recycled plastic in the tweeter top cover and power button

60%

recycled plastic in the speakers

Made without¹

- Arsenic-free display glass
- Mercury-free
- Brominated flame retardant-free
- PVC-free
- Beryllium-free
- Lead-free solder

Apple GiveBack

Return your device through Apple GiveBack and we'll give it a new life or recycle it for free.

Enclosure made with low-carbon aluminum

This report includes data current as of product launch. Product evaluations are based on U.S. configuration of 12.9-inch iPad Pro (64GB).

Taking responsibility for our products at every stage

We take responsibility for our products throughout their life cycles—including the materials they are made of, the people who assemble them, and how they are recycled at end of life. And we focus on the areas where we can make the biggest difference: reducing our impact on climate change, conserving precious resources, and using safer materials.

We sell millions of products. So making even small adjustments can have a meaningful impact.

Carbon footprint

We are working to reduce Apple's contribution to climate change—which is threatening human health and well-being at a global scale—by focusing on making energy-efficient products with recycled or bio-based materials and with renewable energy. We are now sourcing cover glass manufactured primarily with clean energy, which cuts iPad Pro (12.9-inch) cover glass emissions by 73 percent.⁴ However, the new iPad Pro (12.9-inch) design resulted in a 17 percent increase in the product's carbon footprint compared to the previous-generation iPad Pro (12.9-inch)⁵ due to a change in how we manufacture the aluminum enclosure. We're committed to continuing to reduce our greenhouse gas emissions and using our life cycle analysis to drive that change.

iPad Pro (12.9-inch) life cycle carbon emissions

83%	Production
11%	Transport
6%	Use
<1%	End-of-life processing

Source Materials

We increased the recycled content in components, including speakers made with 60 percent recycled plastic.

To conserve precious resources, we work to reduce the material we use and aim to source only recycled or renewable materials in our products. And as we make this transition, we remain committed to the responsible sourcing of primary materials. We identify and map materials in our products to the farthest reaches of our supply chain and proudly lead our industry in establishing the strictest standards for smelters and refiners. Our product designs also consider the safety of those who make, use, and recycle our products, restricting the use of hundreds of harmful substances. Our standards go far beyond what's required by law to protect people and the environment.

Aluminum

Our focus on Apple's carbon footprint and on renewable energy extends to the materials we source. So we prioritized aluminum that was smelted using 100 percent hydroelectricity rather than fossil fuels for the enclosure, where the majority of the aluminum is located.

Plastic

We're transitioning to bio-based and recycled alternatives from petroleum-based plastics. For the iPad Pro (12.9-inch), the plastic in a number of components contains recycled content, including the speakers (60 percent), tweeter top cover (35 percent), power button (35 percent), and Wi-Fi carrier (25 percent).

Tin

We map and identify our primary tin, tantalum, tungsten, gold, and cobalt supply chains to the smelter level, and 100 percent of these smelters have participated in independent third-party audits⁶ annually since 2016.

Made without

Free of harmful substances like mercury, brominated flame retardants, PVC, phthalates, beryllium, lead in the solder, and arsenic in the display glass.¹ And 100 percent of the materials in the iPad Pro (12.9-inch) are protected by our [Regulated Substances Specification](#). We go even further by aiming to understand the nonregulated substances in every part of every product—so far we've identified the makeup of 60 percent by mass of the iPad Pro (12.9-inch).

Make

Every year, we assess our suppliers against our Supplier Code of Conduct, which aims to make workplaces better for employees and for the environment.

We work closely with the suppliers that make our products to reduce their environmental impact, and we ensure that everyone making Apple products is treated with dignity and respect, given opportunities to advance, and works in a safe environment. Our Supplier Code of Conduct sets high expectations for our suppliers. Only on the foundation of these standards can we make further progress, from helping suppliers transition to renewable energy to providing education opportunities for their employees.

Greener chemicals

All iPad Pro (12.9-inch) final assembly sites use safer cleaners and degreasers in their manufacturing processes.⁷

Zero Waste

All iPad Pro (12.9-inch) final assembly sites are Zero Waste.⁸

Supplier energy use

Suppliers reduced iPad Pro (12.9-inch) total manufacturing emissions by 4 percent through Apple's Supplier Clean Energy Program.⁹

Package and Ship

We have nearly eliminated plastic in the iPad Pro (12.9-inch) retail box.

To improve our packaging, we are working to eliminate plastics, increase recycled content, and use less packaging overall. All of the wood fiber in our packaging is either recycled or comes from responsibly managed forests.¹⁰ And we have protected or created enough sustainably managed forests to cover all the wood fiber we use in our packaging. This ensures working forests are able to regrow and continue to clean our air and purify our water.

Smaller and lighter packaging also means fewer emissions from transporting our products—we take responsibility for that too.

100%

of the primary wood fiber in the packaging comes from responsibly managed forests¹⁰

95%

of the retail box is fiber based

38%

recycled content in fiber packaging

Use

iPad Pro (12.9-inch) consumes 68 percent less energy than the limit for ENERGY STAR.

We design our products to be energy efficient, long lasting, and safe. iPad Pro (12.9-inch) uses software and power-efficient components that intelligently manage power consumption. We also run our own Reliability and Environmental Testing Labs so our products go through rigorous testing before they leave our doors. Our support continues throughout each product's life cycle, with regular software updates to keep devices current and a network of authorized repair professionals to service them, if necessary.

Energy consumption of ENERGY STAR-rated products

Apple devices consistently rank among the high-performing products rated by ENERGY STAR—which was established to represent the 25 percent most energy-efficient computers on the market. The iPad Pro (12.9-inch) consumes 12 percent less energy than the previous-generation iPad Pro (12.9-inch)¹¹ and 68 percent less energy than the limit for ENERGY STAR.¹²

100% renewable energy

All iMessages, answers from Siri, FaceTime messages, and song downloads from iTunes are 100 percent powered by renewable energy.¹³

Made with safer materials

We apply rigorous controls for materials users touch most—all based on recommendations from toxicologists and dermatologists.

Recover

Return your product with Apple GiveBack and we'll ensure it has a long life, or we'll recycle it for free.

When products are used longer, fewer resources are extracted from the earth. That's why we launched Apple GiveBack—it offers customers a seamless way to return their old devices to Apple. Customers can trade in eligible devices for an Apple Store Gift Card.¹⁴ If a device is not eligible for credit, we'll recycle it for free. We also offer and participate in [product take-back and recycling programs](#) for 99 percent of the countries where we sell products—and we hold our recyclers to high standards. Our efforts to keep harmful substances out of our products also mean our materials are safer to recover and reuse.

Apple GiveBack

For more information on how to recycle your products at end of life, visit:

www.apple.com/giveback

Definitions

Recycled material: Recycling makes better use of finite resources by sourcing from recovered rather than mined materials.

Responsibly managed renewables: We define renewable materials as those that can be regenerated in a human lifespan, like paper fibers or sugarcane. Renewable materials can help us use fewer finite resources. But even though renewable resources have the ability to regrow, they are not always managed responsibly. That’s why we focus on sources that are certified for their management practices.

Bio-based plastics: Bio-based plastics are made from renewable sources rather than from petroleum-based sources. Bio-based plastics allow us to reduce reliance on petroleum.

Supplier Clean Energy Program: Since the electricity used to make our products is the largest contributor to our overall carbon footprint, we’re helping our suppliers become more energy efficient and transition to new renewable energy sources. As part of this program, Apple and our suppliers will generate and procure more than 4 gigawatts of new clean power worldwide by 2020. Once completed, this will represent approximately one-third of our current manufacturing carbon footprint.

Carbon footprint: Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. Calculation includes emissions for the following life cycle phases contributing to Global Warming Potential (GWP 100 years) in CO₂ equivalency factors (CO₂e):

- **Production:** Includes the extraction, production, and transportation of raw materials, as well as the manufacture, transport, and assembly of all parts and product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from manufacturing site to regional distribution hubs. Transport of products from distribution hubs to end customers is modeled using average distances based on regional geography.
- **Use:** Apple conservatively assumes a three-year period for power use by first owners. Product use scenarios are based on historical customer use data for similar products. Geographic differences in the power grid mix have been accounted for at a regional level.
- **End-of-life processing:** Includes transportation from collection hubs to recycling centers and the energy used in mechanical separation and shredding of parts. For more information on the carbon footprint, visit <https://www.apple.com/environment/answers/>.

Endnotes

¹Apple defines its restrictions on harmful substances, including definitions for what Apple considers to be “free of,” in the [Apple Regulated Substances Specification](#).

²iPad Pro (12.9-inch) achieved a Gold rating for EPEAT in the United States and Canada. Electronic Product Environmental Assessment Tool (EPEAT) is a program that ranks computers and displays based on environmental attributes in accordance with IEEE 1680.1-2018. For more information, visit www.epeat.net.

³Greenhouse gas emissions were calculated using a life cycle assessment methodology and based on 12.9-inch iPad Pro (64GB) memory configuration.

Configuration	Carbon footprint	
	iPad Pro (12.9-inch)	Previous generation iPad Pro (12.9-inch)
64GB	136 kg CO ₂ e	114 kg CO ₂ e
256GB	150 kg CO ₂ e	128 kg CO ₂ e
512GB	151 kg CO ₂ e	142 kg CO ₂ e
1024GB	206 kg CO ₂ e	N/A

⁴Emissions reductions are based on a comparison to default grid emissions.

⁵The previous-generation iPad Pro (12.9-inch) was used for comparison purposes, because it represents the most recently released iPad with the most similar screen size to iPad Pro (12.9-inch).

Endnotes

⁶Third-party assessments make sure minerals in our products are responsibly sourced following standards set by the Organisation for Economic Co-operation and Development and other internationally recognized human rights instruments. Our efforts consider conflict, human rights, and other risks as we go above and beyond what’s required by law.

⁷Only chemicals that meet GreenScreen® benchmark 3 or 4 are considered safer and preferred for use. In 2017, 18 final assembly facilities adopted these safer cleaners. And in 2018, 100% of process chemicals used at final assembly facilities were verified to comply with the [Apple Regulated Substances Specification](#) for the third year in a row. GreenScreen is a comprehensive hazard assessment tool that evaluates substances against 18 different criteria. For more information, visit www.greenscreenchemicals.org.

⁸Final assembly sites for iPad Pro (12.9-inch) are third-party certified as Zero Waste by UL LLC. This means these final assembly sites do not generate any waste sent to landfill.

⁹Percent emissions reduction from supplier renewable energy is based on estimated operational loads as of product launch, compared to default grid emissions.

¹⁰Responsible sourcing of wood fiber is defined in Apple’s [Sustainable Fiber Specification](#). We consider wood fibers to include bamboo.

¹¹The ENERGY STAR Total Energy Consumption (TEC) calculation was used to compare current and previous-generation products.

¹²Energy consumption and energy efficiency values are based on the ENERGY STAR Program Requirements for Computers, including the max energy allowance for the iPad Pro (12.9-inch). For more information, visit www.energystar.gov. ENERGY STAR and the ENERGY STAR mark are registered trademarks owned by the U.S. Environmental Protection Agency.

The iPad Pro (12.9-inch) is tested with a fully charged battery and powered by the 18W USB-C Power Adapter with the USB-C Charge Cable (1m).

- Sleep: Low power state that is entered automatically after two minutes of inactivity (default) or by pressing the Sleep/Wake button. Connected to Wi-Fi. All other settings were left in their default state.
- Idle—Display on: Display brightness was set as defined by ENERGY STAR Program Requirements for Computers, and Auto-Brightness was turned off. Connected to Wi-Fi. All other settings were left in their default state.
- Power adapter, no-load: Condition in which the 18W USB-C Power Adapter with the USB-C Charge Cable (1m) is connected to AC power but not connected to iPad Pro (12.9-inch).
- Power adapter efficiency: Average of the 18W USB-C Power Adapter with the USB-C Charge Cable (1m) measured efficiency when tested at 100 percent, 75 percent, 50 percent, and 25 percent of the power adapter’s rated output current.

Mode	Power consumption for iPad Pro (12.9-inch)		
	100V	115V	230V
Sleep	0.38W	0.23W	0.28W
Idle—Display on	2.89W	2.91W	3.09W
Power adapter, no-load	0.02W	0.02W	0.03W
Power adapter efficiency	87.3%	87.7%	87.9%

¹³Services like iMessage, Siri, FaceTime, and iTunes are powered by data centers that run on 100 percent wind, solar, low-impact hydro, or biogas fuel cell power.

¹⁴Trade-in values will vary based on the condition, year, and configuration of your trade-in device. You must be at least 18 years old to be eligible to trade in for credit or for an Apple Store Gift Card. Not all devices are eligible for credit. More details are available from Apple’s Mac trade-in partner and Apple’s iPhone, iPad, and Apple Watch trade-in partner for trade-in and recycling of eligible devices. Restrictions and limitations may apply. Payments are based on the received device matching the description you provided when your estimate was made. Apple reserves the right to refuse or limit the quantity of any device for any reason. In the Apple Store: Offer only available on presentation of a valid, government-issued photo ID (local law may require saving this information). Value of your current device may be applied toward purchase of a new Apple device. Offer may not be available in all stores. Some stores may have additional requirements.
